# **CS 161B: Programming and Problem Solving I**

### Assignment A01 Sample Algorithmic Design Document

Make a copy before you begin (File -> Make a copy). Add the Assignment # above and complete the sections below BEFORE you begin to code. The sections will expand as you type. When you are finished, download this document as a PDF (File -> Download -> PDF) and submit to D2L.

This document contains an interactive checklist. To mark an item as complete, click on the box (the entire list will be highlighted), then right click (the clicked box will only be highlighted), and choose the checkmark.

Planning your program before you start coding is part of the development process. In this document you will:

■ Paste a screenshot of your zyBooks Challenge and Participation %

☐ Paste a screenshot of your assigned zyLabs completion
✓ Write a detailed description of your program, at least two complete sentences
✓ If applicable, design a sample run with test input and output
✓ Identify the program inputs and their data types
✓ Identify the program outputs and their data types
✓ Identify any calculations or formulas needed
☑ Write the algorithmic steps as pseudocode or a flowchart
1. zyBooks
Add your zyBooks screenshots for the % and assigned zyLabs completions below. Required
Add your zyBooks screenshots for the % and assigned zyLabs completions below. Required percentages: all assigned zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.  Challenge and Participation % screenshot:
percentages: all <b>assigned</b> zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.
percentages: all <b>assigned</b> zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.
percentages: all assigned zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.  Challenge and Participation % screenshot:
percentages: all assigned zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.  Challenge and Participation % screenshot:
percentages: all assigned zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.  Challenge and Participation % screenshot:  N/A

### 2. Program Description

In the box below, describe the purpose of the program. You must include a detailed description with at least two complete sentences.

#### Program description:

This C++ program will calculate the price for a customer's order, using a set menu. The user will be able to select their choices until they quit the program manually. The code will be using several functions, a do-while loop, and an exit condition without breaks or returns in the loop.

## 3. Sample Run

If you are designing your own program, you will start with a sample run. Imagine a user is running your program - what will they see? What inputs do you expect, and what will be the outputs from the given inputs? Choose test data you will use to test your program. Calculate and show the expected outputs. Use the sample run to test your program.

#### Sample run:

```
Welcome to my Food Cart Program!
What would you like to do today?
Pick an option from below:
        1. Place an order
        2. Quit
Invalid Option! Please choose 1-2!
>> 1
Enter the name of your item: Pasta
Enter the cost of your item $: 15.75
Do you want another item? (y/n): y
Enter the name of your item: Bowl
Enter the cost of your item $: 12.75
Do you want another item? (y/n): y
Enter the name of your item: Soda
Enter the cost of your item $: 3.50
Do you want another item? (y/n): x
Invalid Option! Please choose y/n!
>> n
Your total is: $32.00
Enter the amount of tip you want to add $: 3.50
Your total is: $35.50
```

```
You get a 5% discount!
Your discount is $1.78
Your final total is: $33.73
What would you like to do today?
Pick an option from below:
        1. Place an order
        2. Ouit
>> 1
Enter the name of your item: Fajita Bowl
Enter the cost of your item $: 20.75
Do you want another item? (y/n): y
Enter the name of your item: Vietnamese plate
Enter the cost of your item $: 22.75
Do you want another item? (y/n): y
Enter the name of your item: Soda
Enter the cost of your item $: 3.50
Do you want another item? (y/n): x
Invalid Option! Please choose y/n!
>> n
Your total is: $47.00
Enter the amount of tip you want to add $: 10.00
Your total is: $57.00
You get a 10% discount!
Your discount is $5.70
Your final total is: $51.30
What would you like to do today?
Pick an option from below:
        1. Place an order
        2. Ouit
>> 2
Thank you for using my program!
```

# 4. Algorithmic Design

Before you begin coding, **you must first plan out the logic** and think about what data you will use to test your program for correctness. All programmers plan before coding - this saves a lot of time and frustration! Use the steps below to identify the inputs and outputs, calculations, and steps needed to solve the problem.

#### Algorithmic design:

- a. Identify and list all of the user input and their data types.
  - o **itemName** as string (to read menu item name via input)
  - o anotherItem as string (to read another menu item name via input)
  - itemCost as double (to read menu item price via input)
  - o option as integer (to read user's choice using 1 or 2 via input)
- b. Identify and list all of the user output and their data types.
  - discount as double (to hold discount amount, and calculate it)
  - o tip as double (to hold the tip amount)
  - o total as double (to hold the total)
  - totalCost as double (to hold total plus tip)
  - o **prompt** as string (to hold a menu item name)
  - FUNCTIONS:
    - 1. welcome() VOID FUNCTION prototype
    - 2. displayMenu() VOID FUNCTION prototype
    - 3. int readOption(int &option) VOID FUNCTION prototype
    - 4. **readInt**(string prompt, int &num) FUNCTION prototype
    - 5. **readDouble(string prompt, double &num)** VOID FUNCTION prototype
    - 6. placeOrder(double &cost) VOID FUNCTION prototype
    - 7. **tipDISCOUNT**(double &tip, double &discount, double cost) DOUBLE FUNCTION prototype
    - 8. main() INT FUNCTION prototype
- c. What calculations do you need to do to transform inputs into outputs? List all formulas needed, if applicable. If there are no calculations needed, state there are no calculations for this algorithm.
  - SET totalCost = totalCost + tip
  - SET totalCost = totalCost discount
  - SET discount = total \* DISCOUNT AMOUNT1
  - SET discount = total \* DISCOUNT AMOUNT2
  - SET total = total discount
- d. Design the logic of your program using pseudocode or flowcharts. Here is where you would use conditionals, loops or functions (if applicable) and list the steps in transforming inputs into outputs. Walk through your logic steps with the test data from the assignment document or the sample run above.

1. CREATE FUNCTION [void] welcome()

END FUNCTION welcome()

2. CREATE FUNCTION [void] displayMenu()

END FUNCTION displayMenu()

3. CREATE FUNCTION [void] readOption(int &option)

END FUNCTION readOption()

4. CREATE FUNCTION [void] **readInt**(string prompt, int &num)

END FUNCTION readInt()

5. CREATE FUNCTION [void] readDouble (string prompt, double &num)

END FUNCTION readDouble()

6. CREATE FUNCTION [void] placeOrder(double &cost)

END FUNCTION placeOrder()

- 7. CREATE FUNCTION double tipDiscount (double &tip, double &discount, double cost)
- 8. END FUNCTION tipDiscount()
- 9. DECLARE const double DISCOUNT1 = 50.0
- 10. DECLARE const double DISCOUNT2 = 35.0
- 11. DECLARE const double DISCOUNT AMOUNT1 = 0.10
- 12. DECLARE const double DISCOUNT\_AMOUNT2 = 0.05
- 13. CREATE FUNCTION main()
  - a. DECLARE integer option
  - b. DECLARE double totalCost = 0.0
  - c. DO WHILE
    - i. CALL welcome()
    - ii. CALL displayMenu()
    - iii. CALL readOption(option)
    - iv. IF (option = 1) THEN
      - 1. CALL placeOrder(totalCost)
      - 2. DECLARE double tip
      - 3. DECLARE double discount
      - 4. DISPLAY Your total is message
      - 5. CALL readDouble (enter tip string, tip)
      - 6. SET totalCost = totalCost + tip
      - 7. SET totalCost = CALL tipDiscount(tip, discount, totalCost)
      - 8. DISPLAY Your total is message
      - 9. IF (discount > 0) THEN
        - a. DISPLAY "You get a discount" message

- i. use ternary statement here for discount
- b. DISPLAY "Your discount: \$ " + discount
- c. END IF
- v. ELSE IF (option = 2)
  - a. DISPLAY "Thank you for using my program!"
- vi. ELSE
  - 1. DISPLAY "Invalid Option! Please choose 1-2!"
- vii. END IF
- d. WHILE option does not equal 2
- e. END DO WHILE
- f. return 0:
- 14. END FUNCTION main()
- 15. RETURN FUNCTION welcome()
  - a. DISPLAY "Welcome to my Food Cart Program!"
  - b. DISPLAY "What would you like to do today?"
- 16. END FUNCTION welcome()
- 17. RETURN FUNCTION displayMenu()
  - a. DISPLAY "Pick an option from below:"
  - b. DISPLAY "1. Place an order"
  - c. DISPLAY "2. Quit"
  - d. DISPLAY ">> "
- 18. END FUNCTION displayMenu()
- 19. RETURN FUNCTION readOption(int &option)
  - a. CALL readInt("", option)
  - b. WHILE (option < 1 or option > 2)
    - i. DISPLAY "Invalid OPtion! Please choose 1-2!"
    - ii. readInt("", option)
- 20. END FUNCTION readOption()
- 21. RETURN FUNCTION **readInt**(string prompt, int &num)
  - a. while (true)
    - i. DISPLAY prompt
    - ii. IF no input for num
      - 1. CLEAR BUFFER
      - 2. IGNORE the input
      - 3. DISPLAY "Invalid input. Please enter a valid number."
    - iii. ELSE

- 1. IGNORE the input
- 2. break
- iv. END IF
- b. END WHILE
- 22. END FUNCTION readInt()
- 23. RETURN FUNCTION **readDouble**(string prompt, double &num)
  - a. WHILE (true)
    - i. DISPLAY prompt
    - ii. IF there is no input for num
      - 1. CLEAR BUFFER
      - 2. IGNORE the input
      - 3. DISPLAY "Invalid input. Please enter a valid number."
    - iii. ELSE
      - 1. IGNORE the input
      - 2. break
- 24. END FUNCTION readDouble()
- 25. RETURN FUNCTION placeOrder (double &cost)
  - a. DECLARE char anotherItem
  - b. DO
    - i. DECLARE string itemName
    - ii. DECLARE double itemCost
    - iii. DISPLAY "Enter the name of your item: "
    - iv. GET ENTIRE INPUT [getline(cin, itemName)]
    - v. CALL readDouble("Enter the cost of your item \$: ", itemCost)
    - vi. cost = cost + itemCost
    - vii. DISPLAY "Do you want another item? (y/n): "
    - viii. INPUT anotherItem
    - ix. IGNORE the input
    - x. WHILE (tolower(anotherItem) is NOT 'y' && tolower(anotherItem) is NOT 'n'
      - 1. DISPLAY "Invalid Option! Please choose y/n!"
      - 2. DISPLAY "Do you want another item? (y/n): "
      - 3. INPUT anotherItem
      - 4. IGNORE the input
    - xi. END WHILE
  - c. WHILE (tolower(anotherItem is 'y')

- d. END DO WHILE
- 26. END FUNCTION placeOrder()
- 27. RETURN FUNCTION tipDiscount (doublt &tip, double &discount, double cost)
  - a. CALL readDouble("Enter the amount of tip you want to add \$: ", tip)
  - b. DECLARE double total = cost + tip
  - c. IF total is greater than DISCOUNT\_AMOUNT1
    - i. discount = total \* DISCOUNT\_AMOUNT1
  - d. ELSE IF total is greater than DISCOUNT\_AMOUNT2
    - i. discount = total \* DISCOUNT\_AMOUNT2
  - e. ELSE
    - i. discount = 0.0
  - f. END IF
  - g. RETURN total discount
- 28. END FUNCTION tipDiscount()

## 5. Pseudocode Syntax

Think about each step in your algorithm as an action and use the verbs below:

To do this:	Use this verb:	Example:	
Create a variable	DECLARE	DECLARE integer num_dogs	
Print to the console window	DISPLAY	DISPLAY "Hello!"	
Read input from the user into a variable	INPUT	INPUT num_dogs	
Update the contents of a variable	SET	SET num_dogs = num_dogs + 1	
Conditionals			
Use a single alternative conditional	IF condition THEN statement statement END IF	<pre>IF num_dogs &gt; 10 THEN         DISPLAY "That is a lot of dogs!" END IF</pre>	
Use a dual alternative conditional	IF condition THEN statement	IF num_dogs > 10 THEN DISPLAY "You have more than	

Use a switch/case statement	statement ELSE statement statement END IF  SELECT variable or expression CASE value_1: statement statement CASE value_2: statement statement CASE value_2: statement statement DEFAULT: statement statement statement statement Statement DEFAULT: statement statement Statement Statement Statement	10 dogs!" ELSE     DISPLAY "You have ten or fewer dogs!" END IF  SELECT num_dogs     CASE 0: DISPLAY "No dogs!"     CASE 1: DISPLAY "One dog"     CASE 2: DISPLAY "Two dogs"     CASE 3: DISPLAY "Three dogs"     DEFAULT: DISPLAY "Lots of dogs!" END SELECT	
Loops			
Loop while a condition is true - the loop body will execute 0 or more times.	WHILE condition statement statement END WHILE	<pre>SET num_dogs = 1 WHILE num_dogs &lt; 10     DISPLAY num_dogs, " dogs!"     SET num_dogs = num_dogs + 1 END WHILE</pre>	
Loop while a condition is true - the loop body will execute 1 or more times.	DO statement statement WHILE condition	SET num_dogs = 1 DO     DISPLAY num_dogs, " dogs!"     SET num_dogs = num_dogs + 1 WHILE num_dogs < 10	
Loop a specific number of times.	FOR counter = start TO end statement statement END FOR	FOR count = 1 TO 10 DISPLAY num_dogs, "dogs!" END FOR	
Functions			
Create a function	FUNCTION return_type name (parameters) statement statement END FUNCTION	FUNCTION Integer add(Integer num1, Integer num2)  DECLARE Integer sum  SET sum = num1 + num2  RETURN sum  END FUNCTION	
Call a function	CALL function_name	CALL add(2, 3)	
Return data from a function	RETURN value	RETURN 2 + 3
